

**"A must-have for all large Chromebook deployments"**

## How it works:

Simply connect to the **Go-Box User Interface** and quickly configure your enrollment script using one of our pre-made templates.

*\*Pro Tip: Create and save multiple script versions to handle variances at school locations, or to enroll batches of Chromebooks into different OUs!*

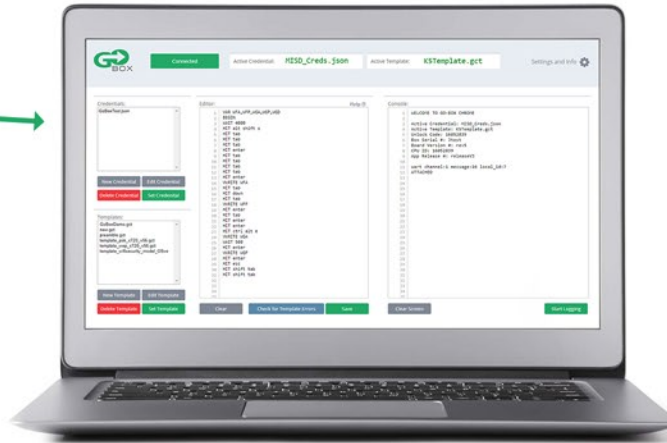

Once your Go-Box is configured:

1. Power on the new Chromebook
2. Connect the Go-Box USB cable
3. Go-Box executes your script and prepares the Chromebook for student use!

Up to 16 Chromebooks can be configured simultaneously. *Your script runs asynchronous across each of the 16 USB channels for even faster operation.*

Go-Box can also help automate your "force wipe" processes on existing Chromebooks!

**Go-Box automates the enrollment and configuration processes on large quantities of Chromebooks**

White glove your new Chromebooks

Help reset existing Chromebooks

- ✓ A powerful automation tool for Chromebooks
- ✓ Compatible with all Chromebook models

**It doesn't get easier or more affordable than this!**

AUTOMATE

*I took a leap of faith that Go-Box would deliver good results and I wasn't disappointed at all! We received the Go-Box, tweaked our provisioning script and off we went. We only had 1 person doing this job and he was able to provision all 1500 Chromebooks in 3 days. By himself. The damn thing just works!*
